

Business Continuity

How to Implement Business Continuity Management

According to the 2009 Chartered Management Institute survey, the number of organisations that have specific business continuity plans has increased slightly compared with 2008. However the percentage of managers reporting that continuity is regarded as important in their organisation fell during 2008 from 76 per cent to 64 per cent.

So why is Business Continuity Management so important and what are the benefits of implementation?

By implementing BCM it will enable you to:

- Identify, minimise and potentially eradicate your Risks
- Gain a better understanding of your organisational structure
- Understand your (inter)dependencies
- Potentially reduce insurance premiums – vital during the current climate
- Minimise loss and increase recovery time objectives
- Enhance your reputation and improve future investment opportunities
- Gain BS25999-2 certification

So how can we help you?

To implement a Business Continuity Management System (BCMS), there is a need to not only understand what you need to do but more fundamentally 'How To' do it.

Having implemented BCMS (BS25999-2 certified) ourselves, we know what works and more importantly what doesn't, we are familiar with 'blind alley's'.

- We can support you in explaining the need for a BCMS within your organisation in order to gain Senior Executive / Board buy in.
- We can show you what documents are required to achieve BS25999 certification.
- We can help you write appropriate plans and procedures for your organisation.
- We can help you identify your risks and look at mitigating strategies to reduce or eradicate them.
- We can support and help you test and exercise your BCM arrangements across your organisation.

Considering implementing BCMS? Then 'talk to Sembcorp'.
